#### **EDUCATION**

# University of Southern California

Los Angeles, CA

B.S., Computer Engineering & Computer Science

Aug 2022 - Dec 2024

• Relevant Coursework: Data Structures & Object-Oriented Programming, Algorithms, Software Development, Full Stack Web Development, Distributed Systems, Computer Networks, Artificial Intelligence, Operating Systems

#### WORK EXPERIENCE

# Software Engineering Intern

May 2024 - May 2025

Pasadena, CA

• Develop robust **test automation scripts** for an application monitoring tool using **TypeScript, JavaScript, Node.js,** and **Microsoft Playwright,** reducing manual end-to-end testing time by **over 40 hours** per month.

- Automate dynamic email and text message confirmations for two-factor authentication and account activity notifications for 188,000+ registered LACERA members via the Twilio and SendGrid APIs.
- Collaborate with a **cross-functional team of engineers** to refactor code and documentation for SSO automation and application monitoring test scripts, cutting **parallel test execution time by 52%** and **debugging time by 12%**.

# Software Engineering Intern

May 2023 - Aug 2023

Hexfork.

**LACERA** 

Remote

- Designed **5+ responsive React.js components**, including navbars and dropdowns, into Hexfork's website, resulting in a **20% increase in website engagement** and improved site usability and navigation.
- Implemented efficient client-side routing with the Next.js framework, reducing page load times by 50%.
- Applied Strapi, a headless Node.js-based CMS, to seamlessly integrate the news page backend with the React frontend, providing real-time content updates to users.

# Software Engineering Intern

Aug 2022 - May 2023

TeraThought

Los Angeles, CA

- Constructed **3+ widgets** following an MVVM design pattern, like a pop-up invite banner and a mobile navbar, utilizing **Kotlin and Android's Jetpack Compose** to create a prototype for a new mobile app, Shareful.
- Partnered with a team of designers, engineers, and project managers to decrease design-to-code conversion time by 2 days and promote consistent UI development.

### **Physics Teaching Assistant**

Aug 2020 - May 2022

University of San Francisco

San Francisco, CA

- Conducted office hours for a class of 100+ students to assist them with physics assignments & exam preparation.
- Enhanced students' problem-solving abilities by explaining different physics concepts & visualizing problems step-by-step with diagrams, resulting in exam scores that **exceeded the 80% class average**.

# **PROJECTS**

# Google Calendar Task Management App | [Github] | [Demo]

Nov 2023

- Led a team of **6+ students** to implement a **full-stack mobile app**, Productiv, allowing users to schedule tasks, collaborate on tasks, and integrate tasks into Google Calendar by employing the **Google Calendar API**.
- Leveraged Java Spring Boot and AWS RDS SQL database to quickly construct a REST API that lets users add or remove tasks, collaborators, and task items via targeted endpoints, handling up to 20 API calls per second.
- Utilized state management techniques using **React Native**, allowing smoother transitions between app pages.

### OCR: Optical Character Recognition | [Github]

Nov 2022

- Built a **C++ program** that uses **polymorphism & inheritance** to identify numbers from 10+ images without machine-learning libraries while accounting for different fonts and styles.
- Devised an algorithm that analyzed pixel distributions and cluster patterns to detect numerical patterns in images.
- Incorporated **3+ mathematical techniques**, such as calculating the Euler number, symmetry, & center of mass, to accurately differentiate the digits 0 to 9 and pass **100% of the Google Test tests** provided.

## **SKILLS**

- Languages: Python, Java, C/C++, JavaScript, HTML/CSS, TypeScript, SQL, Kotlin
- Tools/Frameworks: React.js, React Native, Git, Spring Boot, Django, Node.js, Next.js, Bootstrap, Tailwind, Flask, Agile, CI/CD, Jira, Confluence, Amazon Web Services (AWS), Azure DevOps, Docker, Unix
